RESIDUAL TIME ENERGY BLOWOUT

Camp Design Gallery presents a solo show by David Lindberg, a collection commissioned by the gallery on the occasion of Design Miami/ 2017.

In Residual Time Energy Blowout, imagination and engineering are melted in a unique inquiry: a continual variation focused on light, color, and transparency with formless, glowing shades. Light plays a key role in these works—here we find the electrical element itself.

The electromorphism is tangible and the resin, with its fluid consistency and its irregular course, faithfully expresses the wave transmission characteristic of electric energy.

A series of grids of LED bulbs are attenuated by the colored layer of resin, which the artist imposes on it as a filter.

"Residual time energy blowout explores the boundaries / challenges of a post printed circuit board world of lighting objects.

Where society accepted the existence of pcb's (post circuit board's) just for the convenience of mass production, we feel an obligation to rid ourselves of this carrier. The circuit itself becomes the structural fabric, as light and transparency embrace each other, opposed to the entities that are here to absorb that energy, as living beings. For the construction, we are not doing anything with cnc fabrication, instead the structures are hand-made, and develop with immediate intuitively. For electricity control, we are experimenting with micro-controllers, but mostly we use low voltage Direct Current (DC), which we often control Pulse Width Modulation to control the electricity, as well as potentiometers for viewer interactive control of the works." David Lindberg

CAMP DESIGN GALLERY

Camp Design Gallery, Milan, specializes in collectible contemporary design that aims to investigate material culture, renewing the concept of design and production beyond the canonical limits of art and design in the name of unique works, exclusive and different. The gallery is based on the collaboration between Beatrice Bianco and Valentina Lucio, who, after several years of experience at Italian and international galleries, from 2015 undertook a common path: more personal and free interpretation on contemporary design collectibles. Their work is based on research, experimentation, and contamination of contemporary codes and languages that results in unique design objects born from the collaboration of international designers and artists. "Camp is primarily a way to enjoy things, to appreciate them, not to judge them" writes Gillo Dorfles.

DAVID LINDBERG

David Lindberg , born in the United States, Iowa, in 1964, lives and works between Amsterdam and New York. He has exhibited in contemporary art galleries, including the Italian Mimmo Scognamiglio, Traghetto gallery and Studio la Città, as well as in renowned international fairs like Art Basel, Art Brussels, Art Chicago, Art Cologne, FIAC Paris and recently participated in Art First Bologna with a site-specific installation in the Library Salarosa. One of his most impressive work has been exhibited in the Milan's Bocconi University collection.
